Q: how to pass variable to url-string from url-builder in angular2. I'm working with angular2 beta 17 and I need to pass a variable to an url string. I tried the following: `let description = "This is a description" if (someCondition) { this.router.navigate(['home', {desc: description}], {replaceUrl: true}); }` which is a simplified version. I get the error "Cannot find a differ supporting object '['
